Here is the report exactly as sent to me by the doctor

I saw a 68yo gentleman 2 weeks ago that had a basal cell cancer on the left side of his face. I had seen him previously last year and had prescribed curaderm ointment for the basal cell. The curaderm appeared to clear the face up completely after it had eaten into the flesh, created a small crater like Indention and then healed over. However, over the last couple of months the basal cell came back.

On this follow up visit, I decided to use the Cellsonic on his face. I set the machine at level 4 and 250 pulses. I followed up with him yesterday and the face has completely healed. He put no other medicines on his face after the Cellsonic treatment and now he is an extremely happy man.

I asked for photos. He sent these on April 7, 2022:

The pictures speak for themselves.

Two points to note: the duration of the treatment and no side effects.

The doctor reports that he gave the patient 250 pulses with the CellSonic machine. The pulses are generated at a rate of four a second. Thus, the treatment took one minute.

There are no side effects. The treatment is safe. This means that if you suspect the blemish is cancer, you can treat it. There is no need to have it diagnosed and waste time. You can do it straight away and using the cancer compass, you get verification.

If the skin cancer is on the face be careful near the eyes and ears. Never aim directly into the eyes or ears. The area between the eyes and ears is all right and this is one of the places to treat for multiple sclerosis.
