Imagine how to start a new research department and you will find many suggestions: how to find the right expertise, how to find investment, how to organise an effective research system.

When you have the right contacts, you will surely get the opportunity to build up a constructive beginning. A new idea might be in bringing existing research laboratories together facing the same goal and subject looking for ways to ameliorate the working conditions and results.

Organizing a new company formed by complementary laboratories and co-operative agents with different disciplines would be an exciting challenge.

Evaluation Team

When partners have been found and functions have been cleared up, the formation of a valorisation team should be an option to obtain an impartial control of the ongoing activities.

Participation in the search for possibilities of commercialization will be included in the task of such a team, which will bring an extra impulse to obtain clear results in the working field. For that goal the team will stand by in valorisation of the advances of the different investigations and will advise for the application of a patent in due time.

Databases

The availability of a large quantity of patient information data will be the way to reliable new investigations. A co-operative network of integrated datasets will be the key to a more extended review of

the data such as the review of the results of a special treatment in different circumstances and will bring surprising information. With this condition diagnostic values and personalized treatment have a chance to be more and more developed.

Co-operation

Different laboratories in one company should work on the bases of sharing their data when they are in charge of investigation of the same subject. Different laboratories could take up each their own part in an investigation.

Economics

The way of investment has to give the guarantees for several years to come. The choice has to be made how the income of the co-operative partners will be distributed. Juridical aspects have to be included in the formation.
