### Abstract

*In this article, the author, in a slightly different way, reflected upon interconnectivity and mutual overlapping of human personality, society and their fundamental relationship his subject of study, in the light of which he has expressed some thoughts about the future, based on the rapid pace of the present time. It is hoped that it will be liked by the readers [1,2].*

**Keywords:** Futurity, Personality, Sociality

### 1. Introduction:

Humans and other forms of life have endured the most difficult conditions of life as a result of their experience of survival with the power to survive is a scientifically recognized and established fact, however, in the ongoing era of rapidity that is endowed with all possibilities those can not only effect various layers within a person as reported/accepted in such a way that it could has a direct impact on society/ sociality and other aspects of life including basic personality structure but also could [3-11]. Evolve something amazing, new and unusual [12]. Therefore, it is not unreasonable to think that the fast-paced life could lead to changes in personality as well as social aspects, Now, in this regard, it seems reasonable and balanced to adopt a thoughtful title towards this situation and to express thoughts on some possible forms if, amiably, be explained, so that some pre-emptive measures can be taken and a happy preparation can be made to welcome the future [13-16]. The realistic way of thinking convinces that if yesterday was yesterday, then today is today, and if today is today, then tomorrow will be tomorrow and This is what is life [17]. Because the author is a disabled person with a long-life experience as a human being, he can say in the light of his experience as a psychologist that life and society are not as difficult as they have been understood to be, because life and believers change for the better, and instead of the past, we are in a new era [18]. So, when great and sudden changes have occurred over time and life, leaving man and his personality as they were, and have become the means for new things to happen to him in their presence, then the next things will not be

too difficult for person who is blessed with a self-regulating system that is based on a well-known truth, when stress [19,20]. increases, the reaction is that the human inner self evokes, by seeking help from these dormant forces, becomes able to subjugate its outer self again. There is a continuity of survival that I call servility in my own way It is always made to win and cannot be defeated even if man himself wants to, and sociality is like his children. This is the sacred secret of societies and civilizations lost in the shadows, and live in the relics, those would have required many centuries to understand society/sociality and civilization. The simplest recipe for solving this seemingly complex mystery seems to lie in just in a few words, which can be called balance, prudence, patience, and determination [21-24]. Now, how all these characteristics and properties arise and how they are combined cannot be understood scientifically. It is just like a person trying to count the moths flying around a light source during the rainy season, or trying to understand the stars lying on the roof at night and their number, or trying to figure out how many times a person has breathed in and out in his life. However, experience and thought say that as a result of understanding them, it will be easier to understand what the man of tomorrow will be like and what the future may hold. As for us being able to understand that what is will remain as it is and what is not will remain as it is not, this may be a miscalculated thought, because is part of the beauty of life, and if life were not beautiful, it would not exist now, it would have disappeared, because good things are meant to remain and bad things are meant to disappear. Everyone knows that the spatial characteristics of the different

---

forms of life in the world are significantly different from each other, especially in this regard, the states of motion are significantly different, for example movement and self-preservation(Protection) through experience, as well as the use of various other means [25-27]. The survival and protection of man has become such a unique benefit that it can be considered a guarantee of his survival and preservation of existence until the end of time [28]. Perhaps it was these mysterious, dangerous, incredible, and incomprehensible forces of humanity that created the most severe difficulties for the survival of modern man through new inventions [29-31]. So, will the human personality, in light of past experiences, try to adapt itself to the new environment as a result? This is a strange and extremely difficult question that I will try to cover in this article in a theoretical and intellectual way. Personally, I acknowledge this fact that both, guessing and speculating are sometimes necessary in difficult situations but those who use both are well aware that there is a logical justification and reasoning for doing so, but, those who use both are well aware that there is a logical justification and reasoning for doing so. The whole world and psychologists know that the human self and personality have been changing and that changing is part of its nature and fermentation. This is also based on a well-known truth that when stress increases, it affects the personality. When something affects the personality, the individual changes and so does society [32]. So, is it right to think that in the world we live in, full of the most powerful and sophisticated weapons, which are mentioned daily in the media, the possibility of human beings, along with social values, attitudes, or other things, changing should not be ignored? I remember that about 70 years ago, boys who were studying in school or college used to fight among themselves every day over small matters. Some friends would get involved in such situations and in a short time, peace would be restored. In such situations, some saviors would also come forward. I cannot write down the words that boys generally used for them. However, situations and times keep changing and people remain unchanged, but what is alive has to be seen and understood to keep changing. I remember when I was commissioned in the army, boxing was mandatory for cadets, in which people would break their mouths and teeth, but despite that, the cadets were happy and slept well. However, every nation, culture and way of life has its own unique ways. In the present era, we are busy trying to make ourselves extremely civilized, so we are ready to cross any limit, no matter how extreme. This is a war-related perspective, but I believe it to be true. He who cannot die cannot fight, and he who cannot fight is intimidated by weapons. I remember a battle in Islamic history in which a companion of the Prophet fought with a wooden stick against the most famous swordsmen of that time, and the Muslims won that battle. I also believe that only one being in the universe knows the future, and the one who knows it is not afraid of the future. Those who read this article may be surprised to read that before I felt sorry for those who stole ideas, I didn't laugh, but now I feel sorry because someone who can't walk on their own needs some support to walk. Why does this happen? Those who do this should ask their parents because often such people shy away from asking their parents anything.

## 2. Conclusion

Due to the increase, it is believed that there is a possibility of a major change in human personality and society at the social level, which may result in different methods of leadership. Therefore, understanding situations objectively and becoming more aware of your selves/outer around you all.

### **A Description of the State of the Surrounding Environment and People About the Coming Tomorrow and its Possible Effects**

All the world's scientists believe that nothing in the world or in human history happens without a reason or justification. Therefore, whatever is happening, has been happening, or is about to happen is not without some justification or necessity. It is also recognized that in human history, no individual, nation, power, or other center has been blessed with permanence and survival [33]. It is also true that despite having no precedent, man in the modern world is consistently lost in the same actions and methods that were the means of destruction and ruin for his ancestors, which proves that until man achieves his final victory, he will continue to fight and be defeated by death. This is the most dangerous tactic of a hidden powerful being who wants man to admit defeat, but the destructive power inherent in every human being keeps him from doing so. I think everything has been told about this situation before it even happens, and I can say, in the light of my psychological and war-reading, that the effects of a major war in the modern world cannot be denied, which were foretold by a true man who showed everything that was going to happen, from the first man to the last man on earth. In light of this, I can speculate that the world will cease to exist and neither will humans [34,35]. The area where I live will cease to exist, and even where very safe people live, nothing will remain because this is what He wants and His decision, which no one has the power to change because He is the creator of life as well as death, and He knows how to manage His creation very well. Since man is basically impatient and cowardly and very soon becomes afraid of death, the great power that I have mentioned, because it has required the greatest torture chamber in the world, the torture chamber, i.e. hell, to welcome everyone, and who is to be kept there and who is to live there, has also been decided, therefore it keeps creating such means through which good deeds are lost and its victims reach the place in the light of its justice that has been prescribed for them due to their actions. But one of the great virtues of this war is that those who die in it will definitely get a last chance to accept true slavery, even those who are the masters of life and death, because no one can escape its grip. Let's see what happens tomorrow. The hell that has been mentioned is so dangerous that if a hole the size of a needle's thread is made in it and just a spark comes out of it, it can burn the entire world. Before I can do this, I seek refuge in Him and also tell the readers that the one who wastes the opportunity is not wise but foolish. There are ways [36-39]. Thought and thinking exist. It is only after reflection that we are alive and because of our life, our death is also alive. Since that master is the most powerful and bravest, he has a strong hatred and confusion for cowards, so that no matter how cunning they are, they cannot escape his grasp. It is better to do what is commanded because there is still time and he wants man

to do what he has been ordered to do because man has no power of his own; he is his slave and cannot escape from him. It is true that those who tell the truth are with Him and He strongly dislikes lies and deceit. It is not right that you should call those who you have followed all your life liars in front of Him. Therefore, it is time to ask for forgiveness from the greatest forgiver. I am a sinner, but I write with full confidence that if you ask for forgiveness, you will definitely get it because He likes it very much. Just don't do anything else. If you can, stop yourself from evil and take refuge in it, because in the coming tomorrow, I think nothing will be left except anger, prejudice, and regret, but it will not yield any results. Remember, do not be written somewhere among the unjust, the cruel, the cowardly, the shameless, the shameless, the shameless, and the shameless, because all of this is extremely undesirable for him, because he is compassionate, brave, and the most powerful.
