Annotation

The war unleashed by Putin in Ukraine has led to the loss of meaningfulness of the whole life of many people, especially those who expected this tragedy. Finding themselves in political, economic, technological and intellectual isolation, people are forced to build their strategic trajectories, realizing at the same time that Putin and his entourage are also building strategic plans in the face of the confrontation of civilization.

Keywords: In, Insulation, Strategy, Values, Modeling

I dream of returning from the war, on which he was born and raised, on the ruins of a poor country, under the rains of tears, but the tyrant is not interred, who declared war on the country, and is not visible about the end and the edge of this war.

I don't presume to prophesy, but I know for sure that I will return even in a hundred centuries

there are no fools in the country, and geniuses, and, defeated in battle, I will be resurrected and sing on your first birthday. Country returned from the war

Igor Talkov, rock song "I will return" (1990)

On February 24, 2022, I instantly lost the meaning of life. Probably, this shock happened to many, but I expected it for almost 30 years – and now it happened. The war with Ukraine, it seems to me, is only the beginning of Putin's monstrous plan to become the most supervillain in the history of mankind, since there are no other reasons to cling to world history.

The situation in which Russia found itself – solely by its own will and initiative – is unique in almost all respects and in its scale: even Hitler's Germany, for all its predatory attitude towards foreign countries and peoples, had justification and justification for its aggressions in its ideology – Russia does not have a single ideological argument. In his desire to wipe out Ukraine from the face of the Earth, and then - everything human, including himself. An extreme form of paranoid suicide.

That is why in the upcoming analysis there is nothing to rely on the historical and cultural, and, consequently, references to scientific, philosophical and any other sources are actually impossible. In Russia, Bogdanov's theory of organization has long disappeared [1, 2], together with the carriers and followers of this theory, Western theories, for example [3, 4], there is simply no one and no need to perceive and implement

Table 1: Insulation depth matrix

glubin insulation	with strategic elections		
	vision in the wake of civilization	Vision on an independent and independent trajectory	division of the situation (improvisational, spontaneous movement)
several months			
several years within one generation			
several generations			
eternal isolation			

Different depths of isolation require different strengths of political determination and will, different scales of ontological ideas about the future, different power of utopian imagination. Unfortunately, ALL political forces and subjects in Russia are able to consider only isolated shallow waters - from a few hours to several months. This leads to a constant drift of positions and opinions depending on the winds and currents of changing circumstances. Deeper isolation, for example, within 5-20 years, no one thinks or imagines it, although it seems to be the most optimistic of all possible.

At the same time, it should be emphasized that I absolutely do not believe in any tunnel effects that multi-caliber methodologists and programmers like to indulge in [5] (in the mid-80s, having heard the word “computer” for the first time, both of them boldly stated that in a tunnel way CCCP overtook everyone: then the Soviet Soviet The “computer” “Kursk” occupied a total volume of one and a half cubic meters, the armored processor weighed 300 kg, and 8 kb of information fit on a disk with an almost half-meter diameter - 40 years passed, and where did we go? Even more ridiculous is the story with toilet paper: it was invented in 1861, by the end of the 19th century it was used by all civilized people, in 1945 the USSR took it out of Germany and a factory for the production of toilet paper with equipment of the late 19th century, it took about 10 years to master this technology, but for 80 years so in the USSR and Russia and did not learn how to make toilet paper of modern standards).

Scenariomatically, strategic options for the further history of the country are very limited:

- Movement in the Wake of Civilization
- movement along an independent and independent trajectory
- movement according to the situation (improvisational, spontaneous movement)

The latter characterizes the entire period of Putin’s rule and his entourage, but it is this situationality and spontaneity of the movement – from the readiness to join NATO to the readiness to fight it at the level of nuclear missile weapons – that testifies to the lack of strategy and strategic thinking, if we understand by strategization not the long-term strategy usual for the Russian mentality, but the choice and strictly following the highest echelon / stratum of values regardless of situations and circumstances.

The main reason for the lack of strategy in the political space of Russia lies in the more than a century of political practice of negative from the struggle of personalities similar and similar to the leader, but qualitatively worse than this leader. This was observed in the team / entourage of Lenin, Stalin, all subsequent Soviet and post-Soviet leaders, who pulled the motorcade with them. illiterate emigrants, illiterate bandits, “Moldovan” and “Dnepropetrovsk”, “St. Petersburg” and “Chekist”, up to court judokas and no less than courtyard boys:

Table 2: Team selection matrix/leader’s environment

	similar	other
better than yourself	with an elective team	elit (competitive) selection
worse than yourself	official selection (Russia last 100 years)	официальный team

It is not only about the highest level of the hierarchy, but about any level and, therefore, about all levels of the hierarchy totally.

This is a continuation not only of the Soviet/Communist traditions, which are inherently repugnant, but also of the traditions of Hit-

ler’s Germany – both of these traditions turn their countries into nameless cemeteries and would like to see the whole world as one continuous unnamed cemetery.

Here is Hitler’s characterization from a civilizational point of view:

"His basic rules were: never to let society "cool down"; never to admit mistakes; never to allow thoughts about the presence of positive sides in the enemy; never to leave room for an alternative; never to admit guilt; every time to concentrate on some one enemy and blame him for all the troubles; people are more likely to believe a big lie than a small one; and if you repeat it often enough, sooner or later people will believe in it" From the description of the psychological portrait of Adolf Hitler made during the war by the US Office of Strategic Services

To these rules should be added four of Putin's rules, the obviousness of which does not need to be proved:

- consider someone else's success a personal insult and mercilessly avenge it
- It is necessary not to threaten, but to trade in threats: blackmail with atomic war is cheaper than the war itself
- only lies: any word of truth is the disclosure of state secrets and the secrets of the identity of the dictator
- Never allow people smarter and better than yourself in your environment

A conscious strategic choice will be possible only with the transition to an elite / competitive selection of the team - everything else in conditions of prolonged isolation simply does not work, and the shortest isolation, alas, is unrealistic after March 1, 2022, the supposed end of the blitz-krieg and the victory parade on Khresh-

chatyk in Kiev (senior officers and generals of the Russian army crossed the border, having in their luggage a ceremonial military uniform and were already spinning in uniforms. holes for orders).

What, in our opinion, is the spectrum of marginal values?

- the thousand-year efforts of mankind to create beauty - man, his home, his temples and cities, his landscapes above any goals, desires and desires of historical plankton
- the history of mankind - the history of its culture, it is the only thing that is worthy to remain after our departure and disappearance; the achievements of culture are not dead material remains and ruins, but works of human creativity - music, poems, painting, everything that we breathed in this world with our souls inspired by the spirit of the Mind, and while creativity is alive, these attributes of creativity are alive, even if they are fossils.
- ethical principles and humanistic principles in the foundation of

all world religions above any legislation, decrees and orders

- the life of EVERY person is important and valuable no less than the life of any other person or even all of humanity - and are we not depriving the Messiah of life?
- War is a crime, and therefore every war must end not only in peace, but also in judgment and sentence, regardless of whether the criminal is the winner or the loser of the war
- Each of us must think, feel and act responsibly as if he were the last person on Earth and in the universe
- There are not and cannot be circumstances that allow us to deviate from our highest values.
- Strategy is forward-looking, but what is missing means nothing if it is not the present and relies on the past.

Thus, we are talking not just about the elimination of the arrogant and lying paranoid, but about changing the entire paradigm of Russia's statehood, up to the refusal of this country in statehood (turning it into a conglomerate of protectorates) and, at least, the creation of a new, democratic and peace-loving state.

Human capital in isolation

This is not about preserving the population, but about creating a reserve for cultured and educated people. Fortunately, only educated people need education, and there are very few of them in Russia, no more than 1% of the population.

Table 3: Human Capital Strategya

insulation depths	strategic elections		
	movement in the wake of civilization	movement along an independent and independent trajectory	movement through the situation (improvisational, spontaneous movement)
several months	Emigration and the formation of Russian cultural, scientific and educational communities	Creation of informal cultural, scientific and educational centers/ clubs	Cultural and educational drift under the influence of political currents
several years within one generation	Preservation of channels of cultural, scientific and educational ties PartialD-Russification Language	Creation of a fundamentally new sphere of culture, science and education and its infrastructure Deanglization of language	Poorly projected reality
several generations	Traffic is difficult	Creation of independent cultural norms and models	Unprojected reality
eternal isolation	Movement is impossible	Creating Independent Traditions and Routines	

It will take only a few years for Russia to confidently say “long-distance viewing” instead of “TV”, “damn web” instead of “Internet” and “desktop” instead of “computer”.

Engineering and Humanitarian Technologies and Standards

- Here it is necessary to turn out / dump plowing almost everything, for example:
 - transition from socio-financial technologies, where people are a means of increasing finances, to financial and social technologies aimed at the well-being of the population with financial resources
 - transition from a territorial-production organization, where the territories and their potential serve as a means of developing pro-

duction and capital, to production-territorial structures that serve the prosperity of the territories and the people inhabiting them with the means of production and industry in general

- transition from state interests to human ones, since the state machine should have neither its own goals nor its own interests, but only satisfy the interests and needs of people; in other words, not people should serve the state, but the state to people
- Transition from service to service, from compulsory labour to self-employment
- transition from calibration of people for technologies and technological schemes to flexible technologies that take into account the individual characteristics of people.

Table 4: Strategy for the formation and development of x and humanitarian technologies and standards

insulation depths	strategic elections		
	movement in the wake of civilization	movement along an independent and independent trajectory	movement through the situation (improvisational, spontaneous movement)
several months	Impossible or very difficult		Conscious impoverishment and proletarianization/lumpenization
several years within one generation	Primitivization technical means and human relations	Creation of a system of own norms and standards	Scientific, technical and professional regression

several generations	Catching up traffic	Alternative development	Revival of lost professions and technologies (blinkers, coachmen, potters, peddlers)
eternal isolation	Museumification and transformation of the country into a reserve	Formation of an alternative civilization	Turning the country into a new Antarctica

Unfortunately, there are already legislative proposals to abandon the metric system of weights and measures and to switch to the Russian system before 1917: a verst (1067 meters), a pound (16.38 kilograms), a bucket (12 liters), etc. , that is, the implementation of the strategy “with the creation of a system of its own norms and standards” is being prepared.

Other spheres of life are secondary to these two (political, economic, legal, environmental, etc.), and therefore are unprincipled and of little interest for analysis.
